

RM-1 Single Unit Rack Mount

RM-2 Dual Unit Rack Mount

The Tech Works RM-1 and RM-2 Rack Mounting Kits are designed for use with our 1 rack unit high by half rack unit wide products. These are metal components with powder coat paint for use in EIA standard 19-inch equipment racks.

The RM-1 includes one Long bracket and one Short bracket and 4 mounting screw to attach the brackets to our DM (Desk Mount) packages.

The RM-2 includes two short ears and double wide metal top and mounting screws. To install the RM-2 you simply remove the Desk Mount tops of the two units to be mounted and place them side by side on the bench. Place the doublewide top on the two units and replace the screws. Then using the rack ear screws that come with the kit you attach the short ears to the outside of the package. Remove the back labels from the original Desk Mount tops and place them on the back of the completed unit.

RM-1 and RM-2

Rack Mounting Kits
